NanoViricides

NanoViricides Announces Phase 2 Ebola Trial Approval and Prepares Next Regulatory Filing

Phase 2 Ebola Trial Advancing As Expected. Nanoviricides announced that it has received approval from the National Ethics Committee in the Democratic Republic of Congo (DRC) for its Phase 2 clinical trial of NV-387 in Ebola. The next step is the filing of a Clinical Trial Application with ACOREP, the DRC regulatory authority. This meets one of our expected milestones to start of patient treatment during summer 2026.

Two Phase 2 Trials Should Begin In A Matter of Weeks. The approval by the National Ethics Committee was a step in the process of starting clinical trials in the DRC. The company has shipped the clinical supplies of NV-387 and is preparing for a Phase 2 trial in MPox and a separate Phase 2 trial in Ebola. We expect regulatory approvals in the next several weeks to allow both trials to begin treating patients during summer 2026 through fall 2026.

Ebola Outbreak Continues In The DRC. In May 2026, an outbreak of Ebola caused a public health crisis in the DRC that required moving the trial sites for MPox and Ebola. Recently, the outbreak has spread to two additional provinces in the northeastern region of the DRC, Haut-Uele and Tshopo, with an increase in both the number of confirmed cases and deaths. These outbreaks highlight the unmet medical needs but briefly delayed the start of both trials.

Both Trials Test NV-387, The Lead Product. NV-387 is a novel antiviral, composed of a polymer carrying peptide sequences that viruses recognize as surface receptors of healthy cells. When a virus mistakes the peptide for a healthy cell and binds to it, the virus is engulfed by the flexible polymer portion and destroyed. These receptors used by the viruses to attach to healthy cells are highly conserved across unrelated viral families, potentially giving broad efficacy against many types of viruses.

Conclusion. The approval by the National Ethics Committee in the DRC was received within the timeframe we had expected. Following receipt of the approval by ACOREP, we expect the Phase 2 trial to begin as anticipated. We are reiterating our Outperform rating and \$6 price target.

Summary — Phase 2 Ebola Trial Advancing As Expected. Nanoviricides announced that it has received approval from the National Ethics Committee in the Democratic Republic of Congo (DRC) for its Phase 2 clinical trial of NV-387 in Bundibugyo Ebolavirus. This approval meets our expected time frame for the trial. The next step toward starting the trial is filing a Clinical Trial Application with ACOREP (*Autorité Congolaise de Réglementation Pharmaceutique*), the DRC regulatory authority. We continue to expect patient treatment to begin during summer 2026.

Two Phase 2 Trials Should Begin In A Matter of Weeks. The approval by the National Ethics Committee completes one of the remaining steps in the process of starting clinical trials in the DRC. The company has shipped the clinical supplies of NV-387 and is preparing for a Phase 2 trial in MPox and a separate Phase 2 in Ebola. We expect regulatory approvals in the next several weeks to allow both trials to treat patients during summer 2026 through fall 2026.

Ebola Outbreak Continues In The DRC. In May 2026, there was an Ebola outbreak in the DRC. The World Health Organization (WHO) responded by declaring a Public Health Emergency of International Concern (PHEIC), its highest level of global health alert. A PHEIC is reserved for extraordinary events that pose a serious public health risk to other countries. Its declaration mobilizes a coordinated international response, including funding and international resources.

While the PHEIC highlighted the unmet medical need for new MPox and Ebola treatments, it briefly delayed the start of the NanoViricides Phase 2 trial. In addition to health-related restrictions in the region, it necessitated a change of the Phase 2 clinical site to a new, remote hospital site in the DRC. This new site required preparation and staff training, delaying the trials by a few weeks. Recently, the outbreak has spread to two additional provinces in the northeastern region of the DRC, Haut-Uele and Tshopo, with an increase in both the number of confirmed cases and deaths.

Both Trials Test NV-387, The Lead Product. NV-387 is a novel antiviral, composed of a polymer carrying peptide sequences that viruses recognize as surface receptors of healthy cells. When a virus mistakes the peptide for a healthy cell and binds to it, the virus is engulfed by the flexible polymer portion and destroyed. These receptors used by the viruses to attach to healthy cells are highly conserved across unrelated viral families. The glycoprotein sequence in NV-387 has shown preclinical efficacy against multiple viruses, giving potential for broad-spectrum activity and development for multiple diseases.

Exhibit 1. Nanoviricides Mechanism of Action. The nanoviricides bind to the target virus, encapsulate it, and destroy its ability to infect cells.

Source: NanoViricides, Inc.

Conclusion. The approval by the National Ethics Committee in the DRC was received within the timeframe we had expected. Following receipt of the approval by ACOREP, we expect the Phase 2 trial to begin as anticipated. We are reiterating our Outperform rating and \$6 price target.

Company Profile

NanoViricides, Inc. is developing a novel class of broad-spectrum antiviral therapies. Its technology platform is based on discoveries by the Founder and Executive Chairman, Anil R. Diwan, Ph.D. The company is headquartered in Shelton, Connecticut, where it maintains research and manufacturing facilities. The lead product, NV-387, is a broad spectrum antiviral in development for MPox, Ebola, and Measles.

Fundamental Analysis

Our fundamental assessment rating, separate from our investment rating and valuation, is based on five attributes. We assign 4.0 checks out of 5.0 checks, which falls within our "Above Average" range. We give the company 4.0 checks out of 5.0, based on the proprietary nature of its technology, the unmet needs of the indications in development, and experience of its management. The indications in development could be used to treat outbreaks of infectious diseases that have no effective treatments. Several indications in development could be sold to the US and foreign governments for biodefense preparedness.

Valuation Summary

Our valuation of NNVC is based on successful completion of the Phase 2a and 2b trials for MPox and Ebola in the DRC, followed by an application for approval for emergency use. Although the pathway for US approval is unclear, we have based our revenues on the ex-US sales at this time. Our timeframes are intentionally conservative to allow for international approvals and purchases by non-government organizations. We discount our revenue projections to allow for clinical risk and competition in the MPox and Ebola indications. We discount our FY2029 EPS estimate of \$0.95 at 30% per year and apply a multiple of 15X for a price target of \$6 per share.

GENERAL DISCLAIMERS

All statements or opinions contained herein that include the words "we", "us", or "our" are solely the responsibility of Noble Capital Markets, Inc. IMPORTANT DISCLOSURES

This publication is confidential for the information of the addressee only and may not be reproduced in whole or in part, copies circulated, or discussed to another party, without the written consent of Noble Capital Markets, Inc. ("Noble"). Noble seeks to update its research as appropriate, but may be unable to do so based upon various regulatory constraints. Research reports are not published at regular intervals; publication times and dates are based upon the analyst's judgement. Noble professionals including traders, salespeople and investment bankers may provide written or oral market commentary, or discuss trading strategies to Noble clients and the Noble proprietary trading desk that reflect opinions that are contrary to the opinions expressed in this research report.

The majority of companies that Noble follows are emerging growth companies. Securities in these companies involve a higher degree of risk and more volatility than the securities of more established companies. The securities discussed in Noble research reports may not be suitable for some investors and as such, investors must take extra care and make their own determination of the appropriateness of an investment based upon risk tolerance, investment objectives and financial status.

Company Specific Disclosures

The following disclosures relate to relationships between Noble and the company (the "Company") covered by the Noble Research Division and referred to in this research report.

The Company in this report is a participant in the Company Sponsored Research Program ("CSR"); Noble receives compensation from the Company for such participation. No part of the CSR compensation was, is, or will be directly or indirectly related to any specific recommendations or views expressed by the analyst in this research report.

Noble intends to seek compensation for investment banking services and non-investment banking services (securities and non-securities related) within the next 3 months.

Noble is not a market maker in the Company.

FUNDAMENTAL ASSESSMENT

The fundamental assessment rating system is designed to provide insights on the company's fundamentals both on a macro level, which incorporates a company's market opportunity and competitive position, and on a micro/company specific level. The micro/company specific attributes include operating & financial leverage, and corporate governance/management. The number of check marks that a company receives is designed to provide a quick reference and easy determination of the company's fundamentals based upon the following five attributes of the company (weighting reflects the importance of each attribute in the overall scoring of company's fundamental analysis):

Attribute	Weighting
Corporate Governance/Management	20%
Market Opportunity Analysis	20%
Competitive Position	20%
Operating Leverage	20%
Financial Leverage	20%

For each attribute, the analysts score the company from a low of zero to a high of ten based upon the analysis described below. The final rating and resulting check marks is a result of dividing the overall score (out of 100%) by ten.

Rating	Score	Checks
Superior	9.1 to 10	Five Checks
Superior	8.1 to 9	Four & A Half Checks
Above Average	7.1 to 8	Four Checks
Above Average	6.1 to 7	Three & A Half Checks
Average	5.1 to 6	Three Checks
Average	4 to 5	Two & A Half Checks
Below Average	3 to 3.9	Two Checks
Below Average	2 to 2.9	One & A Half Checks
Low Quality	0 to 1.9	One Check

While these are the attributes currently used for the analyst's fundamental analysis, the attributes and weighting may be reviewed, updated with additional attributes, and/or changed in the future based on discussions with the analysts and recommendations from the Director of Research.

Following is the description of each attribute in the fundamental analysis.

Corporate Governance/Management

We believe that a review of corporate governance and assessment of the senior management are important tools to determine investment merit. Good corporate governance aligns management with the interests of stakeholders. As such, analysts are to rank the company on the basis of good corporate governance principles that may include rules and procedures, board composition and staggered term limits, rights and responsibilities, corporate objectives, monitoring of actions and policies, and accountability. In addition, analysts will assess issues with controlling shareholders and whether decisions have been made in the past that were in the interests of all shareholders. In addition, management will be assessed based on industry experience, expertise, and/or track record.

High ranking example: Board and management that is aligned with the interests of shareholders with incentives based on stock price appreciation and with an experienced management team known for exceptional shareholder returns.

Low ranking example: Concentrated ownership without independent directors that do not necessarily align with all shareholders' interests.

The Market Opportunity Analysis

In this review, the analyst assesses the company's macro environment as a measure of understanding the industry. Factors considered include the size and growth potential of the industry under various economic conditions, the emerging demands in the market, technological benefits/disruptions, competition, geographical opportunities, and customer demands/needs, and an assessment of supply and distribution channels. In addition, the analyst will review legal and regulatory trends, as well as potential shifts in consumer or social behavior and natural environment changes.

High rank example: A company in an industry that is growing revenues well above GDP rates (which are on average 2% plus) and/or may have unmet or underserved needs in a rapidly growing market opportunity.

Low rank example: A mature industry that is in secular decline and likely to grow below GDP rates.

Competitive Position

The evaluation of the company's competitive position is another macro environment attribute designed to measure the relevance, market share, position and value proposition, and sustainable differentiations of the company and its products/services within its industry. Ease of entry into the industry and the ability of other well-funded players to potentially enter the market would be determined. As such, the assessment would consider the company's strengths and advantages of its products/services against weaknesses and limitations. This may include the company's current brand awareness, pricing and cost structure, current market strategies and geographic penetration that may affect demand for its products/services. In addition, the company's competitors would be evaluated.

High rank example: An analyst would consider the company's product to be superior to its competitors and that should allow the company to gain market share.

Low rank example: A company with a "me-too" product that does not have any significant technology advantages in an industry that has low barriers to entry.

Operating Leverage

Simplistically, operating leverage is determined by the operating income relative to changes in revenue. The analyst will calculate the impact on sensitivity on gross margins and variable costs to determine operating leverage. The analyst will take into account the ability of the company to cut fixed and variable costs in a challenged revenue environment and technological changes that may impact operating expenses. In addition, the analyst is to assess corporate strategies that include capital investment, which may be required for sustainable revenue growth, marketing expenses, and the company's ability to attract and retain talent and/or employees. The analyst should focus on the revenue opportunity and determine the price elasticity of demand for the company's products or services. In other words, the analyst is to rank the company based on improved operating margins going forward on an absolute and relative basis.

High rank example: A company that has improving margins for the foreseeable future, with significant price elasticity.

Low rank example: A company that is in a challenged revenue environment with a fixed cost structure and limited ability to cut costs, indicating an outlook for declining margins.

Financial Leverage

A strict definition of financial leverage is total debt divided by total shareholder's equity. Financial leverage analysis is to determine the company's ability to improve shareholder value by means of utilizing its balance sheet to grow organically or to acquire assets. Analysts may look at the company's debt to cash flow leverage ratio, interest coverage ratios, or debt to equity ratios. In addition, the interest rate environment and the outlook for interest rates are a factor in determining the company's ability to manage financial leverage. Finally, the analyst is expected to determine the ability to service the debt given the industry and/or company profile, such as cyclical, barriers to entry, history of bankruptcy, consistency in revenue and profit growth, or predictability in sales and profits and large cash reserves. The analyst is expected to take into account capital intensity of the company and the anticipated of capital allocation decisions.

High rank example: A company with predictable and growing revenue and cash flow with modest debt levels. This may indicate that the company could improve shareholder value through growth investments, including acquisitions, using debt financing.

Low rank example: A company in a cyclical industry in a late stage economic cycle that has above average debt leverage and is in an industry that has a history of financial challenges, including bankruptcies.
